DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of claims 16-26 in Paper filed 4/15/04 is acknowledged. The traversal is on the ground(s) that the Examiner's suggestion that the apparatus can be used to practice another and materially different process such as cleaning a wafer is very speculative and really has nothing to do with the Claims as presented in this Patent Application.. This is not found persuasive because the argument has not traversed the reason of the restriction, which is the apparatus can be used to practice another and materially different process such as cleaning a wafer.

The requirement is still deemed proper and is therefore made FINAL.

Allowable Subject Matter

2. Claims 16-26 are allowed because prior art, the closest prior art Rolfson, doesn't suggest that etching the back surface for a period of time that without any part of the front surface getting etched or that is insufficient for the KOH solution to etch all the way through any part of the wafer. Rolfson teaches etching through the substrate to reach the opening 18 on the front surface so that the solutions within chambers 22 and 24 mixed in order to identify the end point. The etching solution would etch the opening 18 on the front surface as it reaches the opening.
